

FUTURE OF GIVING 2020

Intelligence by

sparks & honey

In collaboration with

Morgridge

FAMILY FOUNDATION

This report is a collaboration with MFF. The cultural shifts (and findings) identified in this report are the result of an analysis of signals at the edges of culture, including thousands of articles, search terms, research papers, social listening and quantitative studies, conducted by sparks & honey via its cultural intelligence system, Q™.

Culture Forecast / 2020

sparks & honey

sparks & honey is a technology-based cultural consultancy delivering innovative growth and transformation strategy for global organizations. With their first-of-its-kind, human and AI-powered intelligence platform, Q™, sparks & honey's comprehensive framework for understanding and predicting cultural change drives bold decision-making and business impact for today's leaders. A disruptive force to the traditional consulting model, sparks & honey identifies emerging cultural trends and industry shifts, helping organizations stay ahead of the curve in a disruption-prone world – the company is part of the Omnicom Precision Marketing Group.

Morgridge

FAMILY FOUNDATION

The Morgridge Family Foundation invests in leaders and organizations that are reimagining solutions to some of today's biggest challenges. MFF offers vision, community, and resources to support a network of partners achieving their profound impact. Learn more at thinkmff.org.

GIVING IS EVERYONE'S BUSINESS

In the year 2020, there has never been a better time to unravel the cultural landscape of giving. As we write this, the coronavirus pandemic is raging throughout the world, inequalities that have long been in the shadows are now in the limelight, our environment is burning, and economic chaos is causing uncertainty for people around the world. We need giving now more than ever. Giving is about preserving the resources of our collective future.

Last year, 181 business leaders around the world gathered to sign the “Statement on the Purpose of a Corporation” to redefine the purpose of a company: how it’s meant to function and who it is designed to benefit. Corporate social responsibility is no longer in a silo or something to mark off a list, but rather, it is now fundamental to an

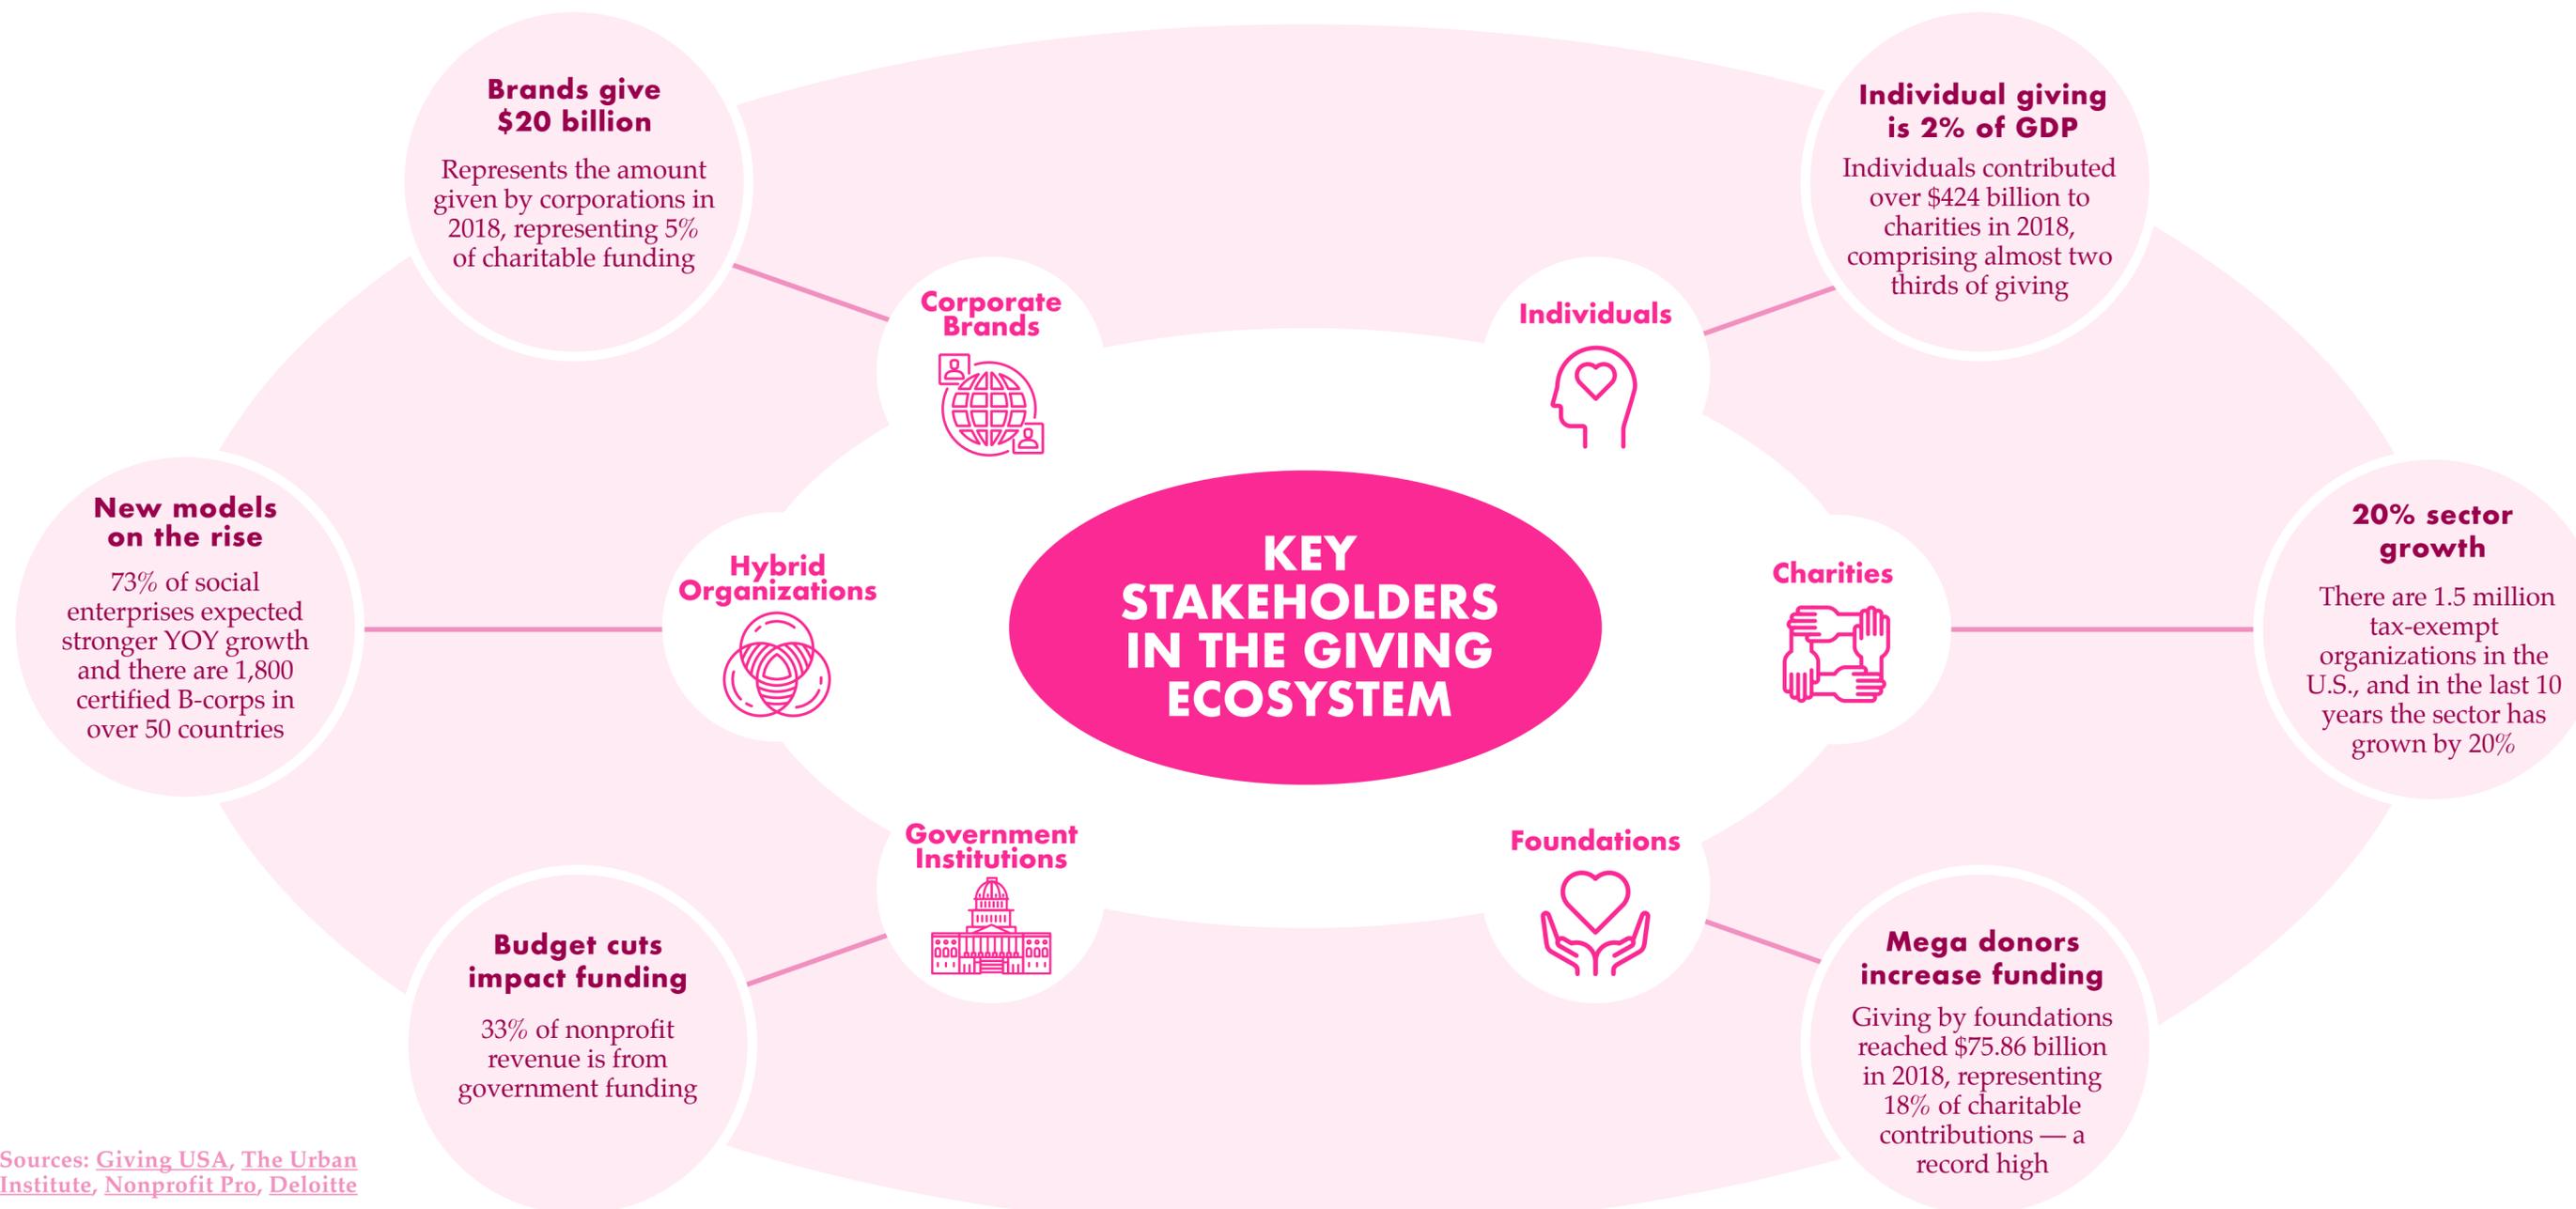

organization’s role in society. Giving points to imagining a world that treats stakeholders of all kinds — everyone, from communities to families, suppliers, and customers — as beneficiaries of shared growth.

In this report, we explore the seismic cultural changes that are shaping the future of giving, where technology, changes in human behaviors, and evolving consumer expectations collide with new business models and data sets, and strategies that reconsider how we work together to solve some of the biggest challenges out there.

Corporations, nonprofits, individuals, leaders and your neighbors all have a role to play. This very moment of crisis is daring us all to do it better.

Giving is about everyone and every organization

Giving taps into a vast and diverse group of stakeholders. This giving ecosystem spans private and public sectors, individuals and larger institutions. Each plays a role within the cultural changes that bring forth the future of giving.

METHODOLOGY

sparks & honey and the Morgridge Family Foundation started this research journey with a question:

What are the cultural shifts impacting the future of giving, and what are the critical implications and opportunities for organizations and giving institutions — now and in the future?

To answer that question, we followed a unique methodology designed to decode culture by bringing together the best of big data and human expertise. Our starting point is our cultural intelligence system, Q™, which collects signals from over a million global data sources from over 140 countries in over 50 languages, 24/7. These signals fall into three categories:

1. What people consume (publications, video content, etc.).
2. What people say (social media, blogs, Reddit, Yelp, etc.).
3. The infrastructure of culture (academic discoveries, patents, startups and legal decisions). Q™ uses 5 layers of AI to source the most energetic global signals and categorize them according to our proprietary trend taxonomy, allowing us to quantify and predict how those trends are growing over time.

We analyzed patterns in our data sets connected to giving and identified the shifts shaping the giving landscape. These core shifts became the basis of interviews with thought leaders, including, sparks & honey Advisory Board members from the public and private sectors, who shared perspectives touching on the technology, science, communications and semantics, and other aspects of the giving landscape.

We organized our findings in five chapters: **Existential Risks to Humanity, Youth Rising, Diminishing Societal Trust, Brand as Benefactor** and **Precision Funding**. Each chapter covers three change areas that present important opportunities for leaders to shape the future of giving and with it, the future of organizations of all kinds.

PRESERVING FUTURE RESOURCES

EXISTENTIAL RISKS TO HUMANITY

01

Humanity is undergoing a massive exercise in resilience due to existential risks that affect millions around the world. The collective experience of destructive forces — from the coronavirus pandemic to climate change and even AI — are a call to preserve our lives, livelihoods and the environments we live in. These cultural shifts also resonate in how and why we give, leaving nonprofits, giving organizations, companies and individuals alike to respond to the urgency and change

their priorities from individual needs to universal ones. From immediate risks, such as the global coronavirus pandemic, to longer-term ones of climate change and AI, where potential and risk live side by side, the future of giving is about preserving resources for our future. In the face of unprecedented hardship, giving not only becomes a heightened priority for every organization and individual — but also an expression of humanity.

CONTAGIOUS GIVING

Pandemic changes how and why we give

The coronavirus pandemic has flipped the world on its head, disrupting the economy as well as social norms — both of which will leave a significant imprint on the organizations focused on giving and the people, companies and charities who give. Because of the economic burden of the pandemic, the motivations and drivers

behind giving will undergo massive change, which will require many organizations to completely restructure and scale back operations, despite unprecedented need. At the same time, organizations from nonprofits to public- and private-sector companies will have to adapt and elevate their giving programs.

GIVING HAS SURGED IN THE PANDEMIC AS PEOPLE RESPOND TO NEEDS

Giving amid the coronavirus crisis has eclipsed donations made in the aftermath of 9/11 and the 2008 recession. As the virus took hold and people were quarantined and losing their jobs, those who were inclined to give, including occasional donors, made charitable contributions in record time. Donor-advised funds have given \$3.4 billion across the nation in 2020, a 28% jump from a year earlier.

CONTEMPLATING SURVIVAL CHANGES MOTIVATIONS

As people contemplate survival, the motivations for giving change with priorities. The pandemic is elevating basic needs, at a time when nearly [half of all Americans \(48%\)](#) report feeling psychological distress, and 18 percent say they have a physical reaction even when

thinking about the pandemic. The desire for basic services that address core needs, such as those that benefit public health or education, are becoming priorities in giving. At the same time, charitable giving that focuses on self-actualization is diminishing.

04

PRECISION FUNDING

05

Ordinary individuals contribute to a vast portion of philanthropy in the U.S. Every year, 100 million people make charitable gifts, with the average household donating around \$3,000. Individual giving extends beyond dollars to equally valuable efforts in volunteering time and labor, which 77 million Americans do every year. The coronavirus pandemic is upending everything from the economy to individual lives, and this is a time when human needs are elevated. While these needs escalate, donations from charitable givers are also

drastically impacted by the pandemic. The most immediate outcome of the pandemic era is decreased giving among those who give the most: individual people. In 2018, [68 percent of charitable gifts](#) came from solo-givers. During times of intense economic stress such as the Great Recession, [giving declines by as much as 15%](#) over a two-year span. As 2020 leaves its mark, funding received from individuals is facing a sharp drop.

FORCES OF RESILIENCY

Climate change may alienate environmental giving

The pandemic is bringing heightened awareness of collective risks to humanity in the longterm. Anxiety from the coronavirus creates constant reminders of our human vulnerability and that of our planet. Given current environmental trends, 163 million Americans, or one in two, will experience a decline in the quality of their environment, more heat and less water, over the next 30 years. Indeed, climate change is seen as a “major threat” to the wellbeing

of life in the U.S. by 60 percent of Americans, a rise of 27 percent from 2009. In a year that has seen record levels of melting glaciers and wildfires, the environment is showing its destructive forces. But the support received for environmental causes shows that this existential threat is underfunded. It may be time to talk about climate change differently.

Take the politics out of climate change

“One of the things I’ve been talking about with a lot of my colleagues is actually moving from the narrative of climate – because there’s just so much stigma and just baggage around that – and into a narrative of resilience. Resiliency is very understandable and depoliticized. And so in terms of the future of giving, as investment dollars come back, what everyone will have on their mind is the concept of resiliency.”

FALLING OUT OF TOUCH

Traditional giving institutions need to wake up

Gen Z has a deep-set notion of social consciousness, but it's one that is often at odds with current charitable organizations. Even though they are keen to implement social change, only 10 percent of Gen Z say

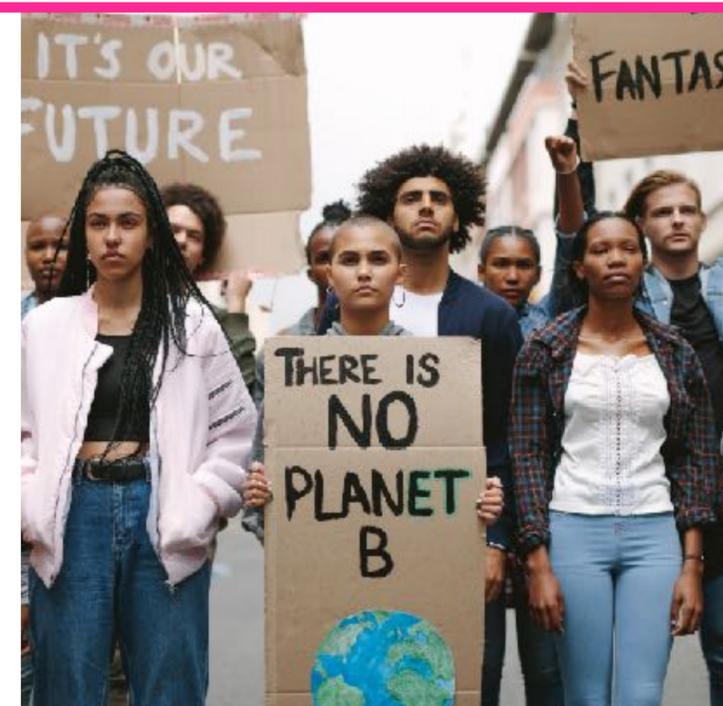

they would like to set up a charity in the future. This disconnect highlights the difference in how modern social enterprise is perceived by the youth against the fabric of traditional giving institutions.

ENVIRONMENTAL JUSTICE ACTIVISTS

70%

Of Gen Z and Millennials are actively fighting climate change

Source: Gallup, "[Younger Americans worried about climate change](#)"

Social enterprise > charity

“I have 100 students at the moment and I asked, how many of you would want to work for a charity? And maybe three would put their hands up. How many want to work for a social enterprise? Most of the class puts their hand up. How many of you want to go work for McKinsey? A few put their hands up. That’s why they’re at business school, which I think is fascinating.”

GET DIGITAL

Gen Z online activism demands giving get digital-savvy, fast

Gen Z's sense of identity is entwined with social and political issues, even when they may get a hard time for all the hours they spend online. Seventy-three percent of Gen Z youth say being politically and socially active is part of their identity. Such deeply personal fervor for activism can stall online too.

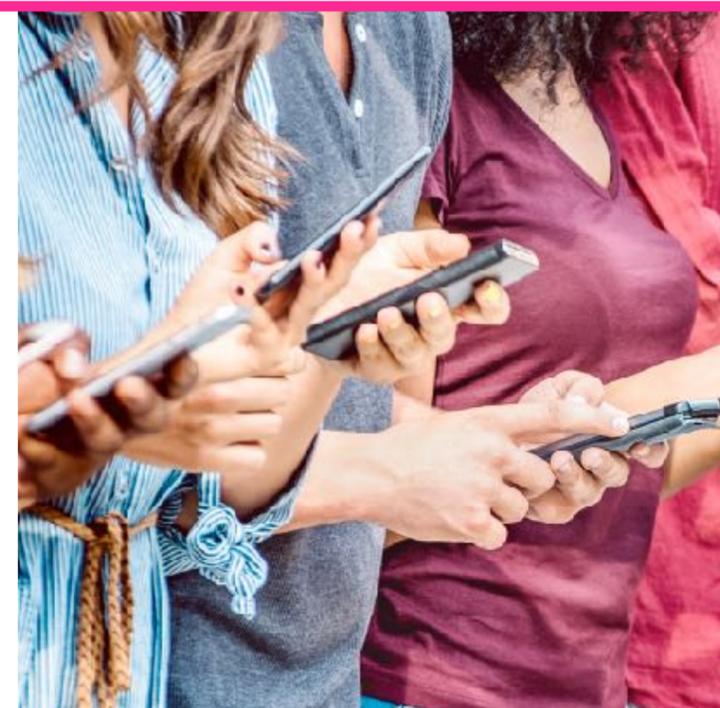

Over half, or 55 percent, say not knowing who to contact or what groups to support stops them from taking further action. Activism may thrive online, but giving organizations often lack a presence there — and they're missing out on engaging with Gen Z because of it.

INSTAGRAM REDESIGNS EASY GIVING

Instagram has a new design for how it handles giving. The easy-access solution is a donation sticker that works like an internal tap-to-donate button. The button lets users easily give to charities with one click, instead of going through multiple actions, which could hinder the impulse to give in the first place.

Source: Fast Company, "[Instagram Just Made It Much Easier For Influencers to Help Drive Charitable Giving](#)"

CORONAVIRUS FORCES NONPROFITS TO MOVE TO ONLINE CHARITIES

Peer-to-peer fundraisers, such as biking, walking, or running for a charity, collectively raise billions for nonprofits. The coronavirus pandemic has left nonprofits scrambling to transform formerly in-person events into virtual ones. The Pancreatic Cancer Action Network's 5K PurpleStride Walk, for example, leaned on its signature color, purple, to change its usual spring event into a virtual fundraising walk.

Source: Forbes, "[How Nonprofits Are Pivoting To Virtual Fundraising In The Face of Covid-19](#)"

Gen Z craves meaning with giving

“Charity doesn’t feel good most of the time. You make a donation and feel good for maybe 10 minutes and think, well, I didn’t really solve the problem. That’s why I think charity and philanthropy are struggling with younger generations, because they do want that deep sense of engagement and connection. They’re not settling for writing a yearly check. In a way, they’re holding themselves to higher standards.”

EXPERIENCE DESIGN MATTERS

Born toggling devices, Gen Z are digital natives who will respond to experience design. To reach them, nonprofits will need to look to creative engagement strategies that help build both communities and fundraising efforts. The pandemic has only highlighted this

need, forcing many peer-to-peer fundraisers to refashion former in-person events into virtual programs. Giving organizations will need to address any skills gaps that stand in the way of being truly present online.

62%

Of Gen Z say brands should help connect them to resources that will help their social/political goals

Source: [Irregular Labs](#)

Empower your givers to feel like activists

“In terms of crowd-driven campaigns, community engagement, and full-on mobilized movement, it's key for charities to map out really where they are comfortable on that scale. Are we really talking about money and micro-donations, or are we talking about people feeling like they are ambassadors and activists and that they have every right to represent this charity? Our role as a charity now is completely ‘bottom up’ to empower them — it’s a huge spectrum of choice.”

FINDING NEW MEANING IN WEALTH

Values of wellbeing, purpose affect perceptions of giving

Younger generations, Gen Z and Millennials, are realizing that notions of wealth reach far beyond the traditional ideals of assets and net worth. Money is one thing, but there is also value in a holistic worldview. “At a basic level, holistic wealth emphasizes wealth in key aspects of life, including financial wealth, physical health, emotional and spiritual wealth; and wealth in our relationships with others, as well as in our contributions to humanity,” author Keisha Blair details

in her book, *Holistic Wealth*. It’s a reset that giving organizations are asked to wake up to, too. Connecting with the generations defined by activism and diversity means that companies will need to align with their values, and find ways to expand the concept of value to include mental wellbeing, projects with purpose, or aspirations of travel. At the same time, inequalities in monetary wealth are exacerbated by the pandemic and intergenerational wealth transfers.

Giving institutions are dealing with a broad shift in the decline of trust. The societal decline in trust was already steeped before the pandemic hit, with [64 percent of Americans](#) saying they lack trust in specific individuals and government. As a pandemic rages, and reveals inequities and systemic flaws, it is set against a downward spiral in trust against the very institutions that were set up to protect us, and have failed. The act of giving now includes a necessary

component that you cannot put a price on: trust. The absence of trust in longstanding, traditional institutions has surfaced new pillars, values and networks of giving, which we will explore here within the three major cultural shifts: Misinfodemic, Grassroots Networks and Declining Religion. Giving institutions will have to exercise true value and trust-building efforts, particularly as they seek out younger generations.

TRANSPARENCY IS A NONPROFIT'S OBLIGATION AND CHALLENGE

The plague of misinformation and constant doubt among the public has giving organizations doing double duty. They are forced to take extra strides to combat misinformation, turning to new tools, such as the Poynter Institute's chatbot or Bolster for Good, to do some of the groundwork for them.

But the public expectation on nonprofit organizations, particularly those that receive their time and money, demand that nonprofits be open and transparent about their operations.

The good news is there are new tools to help instill that trust. The World Wildlife Fund, for example, turned to blockchain startup ConsenSys to develop the [Impactio platform](#) to help supervise and fund their projects, while nonprofit crypto donation platform The Giving Block is delivering a series of [crypto-driven fundraising](#) activities. Digital infrastructure is opening up the doors of transparency for giving organizations contending with declining levels of trust.

NOW

Reliance on big donors

Giving organizations have stuck to the traditional top-down model of giving, relying on big donors, which they end up competing for in an ever-dwindling pool.

FUTURE

The voice of the people counts

Instead of relying on big donors, organizations will move to inspire more communities, and fuel donations from individuals that reverberate with the power of the collective.

ORGANIZATIONAL EFFECT

Donors big and small

Nonprofits are beginning to realize that they do not need to choose between engaging mega-donors or crowdfunding. Instead, they can help communities invest in themselves, and then seek larger support.

MICRO-DONORS TO THE RESCUE

Small communities, individuals making a big difference

The bigger the pool of individuals donating, the better served the beneficiaries are. Nonprofits that rely on big-donor donations, donation size notwithstanding, end up competing for the same donor pool. The result is stiffened competition and a smaller amount for the intended beneficiaries. But issues that affect so many cannot be solved by big donors alone. Micro-funding, a large pool of people donating, has vast reach beyond dollar amounts. The pandemic has seen a swift rise in

[new designs for micro-donations](#), such as TikTok or Instagram adding “click-to-donate” buttons. [Recent research on micro-donations](#) revealed that one out of every five certified charity donors shared a campaign following their donation, and more than half of a campaign’s donation volume is received as a direct result of social sharing from donor and visitor shares. Micro-donations end up building community and engagement with the people who give, who collectively are a force.

NOW

Religion-based giving

The tradition of giving is deeply rooted in religious institutions, but it's on the decline.

FUTURE

Fragmented beliefs open new giving avenues

As religious beliefs become more fragmented and find new shape in spiritualism and values, people will find new ways to support ideas, causes and organizations of their choosing.

ORGANIZATIONAL EFFECT

Divide in religion-based giving

Organizations focused on religion will see some people give even more to churches, while others will view organized religious association as a barrier to giving.

FAITH-LESS AND LESS GIVING

The rise of spiritual and values-based giving

Americans are losing faith in their faith. As a longstanding pillar for many, religion follows in the footsteps of decline in institutional trust. Almost [half of Gen Z](#) (45%) say they “rarely or never” attend church, with similar patterns found among their older Millennial peers. While this wavering faith has many legs, it is also giving new shape to giving, as the traditional philanthropy derived from

religious institutions plummets. This shift in faith means fewer charitable donations that would have otherwise come from religious institutions. In the U.S., 20 million fewer households donated to charity in 2018 than 20 years earlier, a change that is also marked by [adults under 40](#) being less likely to be affiliated with a religion.

Giving and brands are becoming one and the same. Brands may make a big deal about their corporate social responsibility or charitable efforts, but in fact, they only give five percent of all charitable contributions. People look to brands as leaders in giving because they hold their captive eyeballs. But with that comes a responsibility to live up to the values they are meant to exude. They can no longer be in a

silos, but purpose is expected in everything from a CEO's behavior to marketing campaigns, a sustainable supply chain, and more. In particular, young givers, Gen Z and Millennials, expect to see their values reflected in the brands they choose. Giving organizations, in turn, stand to benefit from partnering with brands — and vice versa.

05

Leading some of the most valuable brands and organizations in the world, CEOs are in the spotlight, under media scrutiny and public expectations to use their growing political and economic influence to drive positive change in their communities and beyond. CEOs are using their resources to address issues affecting many, such as student loan debt, environmentalism and, amid a pandemic, relief efforts. Where governments and institutions had a firm hold before,

corporations and their executives are now taking their place in a blurring of the two, giving new meaning to corporate responsibility. Often extremely wealthy, these figureheads are also conflating philanthropy and inequality, a perception that may work against their best efforts. And when CEOs receive greater attention, leaders of other organizations focused on giving will be expected to become more visible and transparent in their operations, too.

BILL GATES HAS BECOME A TARGET FOR CONSPIRACY THEORIES

Microsoft CEO Bill Gates, who has donated over \$100 million toward coronavirus relief efforts through the Gates Foundation, has become the target of conspiracy theorists. In 2015, Gates had warned that a “highly infectious virus” could kill up to 10 million people globally. Since the coronavirus pandemic, he has become a public face of the health crisis, but also a target of conspiracy theorists. There have been over 1.2 million mentions falsely linking Gates to the coronavirus in TV and social media platforms, between February and April 2020.

Source: BBC, "[How Bill Gates Became the Voodoo Doll of Covid Conspiracies!](#)"

CEOS AND CELEBRITIES USE FAME AND FORTUNE TO HIGHLIGHT CAUSES SUCH AS DOMESTIC VIOLENCE

Rihanna and Twitter CEO Jack Dorsey paired up to donate \$4.2 million to Los Angeles shelters to support those facing domestic violence during the pandemic. The money will go toward shelter, expenses, meals and counseling for individuals and families that are particularly vulnerable. The support comes from Rihanna’s Clara Lionel Foundation as part of Dorsey’s plan to give \$1 billion of his wealth to charity.

Source: *Harper's Bazaar*, "[Rihanna and Twitter CEO Donate \\$4.2 Million to Local Shelters](#)"

Extreme wealth associated with perceptions of philanthropy

Extreme wealth is associated with philanthropy in the eye of the public. The number of billionaires in the world has skyrocketed in just five years by 55 percent, to record levels. This rise in extreme wealth comes at a time of growing economic inequality and intensifying scrutiny of ultra-wealthy corporate leaders, such as Bill Gates or Elon Musk. The business practices and personal lives of CEOs are attracting speculation and controversy, such as that surrounding Jeff Bezos, who is anticipated to become the world's first trillionaire.

PURPOSE MEETS POWER

Giving organizations compete with brands

Brands are becoming the new authority on purpose. Values-based consumers are drawn to brands that exude their worldview and ideals. This puts nonprofits and other organizations focused on giving into the perilous position of competing directly against behemoth brands who are quick to grab attention, but may not actually be living up to their outward-leaning purpose. Brands may laud themselves, for example,

for giving one-percent of their pretax profits to charity, while most individuals give double that. Out of [charitable gifts given in 2018](#), corporate giving accounted for five percent of all charitable donations, while people themselves stand well above that, giving 68% of all charitable donations.

RETHINK YOUR SUCCESS METRICS

Don't be a data hoarder, share it for the collaborative good — with partners and organizations, and as a metric for future givers.

Take action on the future of giving

01 EXISTENTIAL RISKS TO HUMANITY

AI GIVING = REPRESENTATION

Philanthropies and for-profit organizations can give humans a voice in policy and design decisions that protect human rights in a world that embraces AI without pause.

COLLABORATE FOR SURVIVAL

Understand that motivations for giving are moving toward collective survival, demanding more sophisticated coordination among public- and private sectors, and new roles to identify and evaluate partners.

RESILIENCY BY DESIGN

The way we talk about climate change can engage or alienate giving. Supporting the development of resiliency measures unites everyone by focusing on imminent changes and adaptation.

02 YOUTH RISING

GET READY FOR GEN Z

Gen Z and Millennials are setting new standards for diversity, inclusion and more. Is your organization's giving DNA ready for Gen Z?

MOBILIZE VIRTUAL GIVING

Philanthropies must invest in reskilling talent to bring giving into the digital era, and for-profits must consider new ways to embed virtual giving into their core business.

VALUES INFLUENCE FUTURE GIVING

Future generations will care about new issues and they are likely to focus their giving on organizations that reflect their values.

03 DIMINISHING SOCIETAL TRUST

BE OPEN — ABOUT EVERYTHING

Embrace your core purpose with gusto and be open about it. Expect scrutiny, but help the outside ease their distrust with transparency, tools and partnerships.

SPACE FOR EVERY VOICE

Create systems for giving that consider even the smallest donations and donors, because it's those voices that are amplified together.

BE OPEN TO THE MANY MINDSETS OF GIVERS

Fragmented beliefs and values have surfaced new ways for people to support causes, ideas and organizations.

Take action on the future of giving

04 BRAND AS BENEFACTOR

SOCIAL IMPACT IS NOT OPTIONAL

CEOs and leaders are expected to take on a greater role in social impact – and their business depends on it.

BRAND PARTNERSHIPS TO EXPAND GIVING

Brands and giving organizations can take on the best of one another, building a new model of partnerships for purpose.

ENCOURAGE EMPLOYEE ACTIVISM

Employees will take on their activist stripes, and it's up to organizations to support their efforts and build a positive giving environment from the inside out.

05 PRECISION FUNDING

DATA = TRANSPARENCY = MORE GIVING

The creative use of data, from results to user engagement, is the most important challenge to future-proof efforts of giving. This spans many other shifts covered in this report, from openness to values.

ACT LIKE A STARTUP

Giving organizations that embrace a startup mentality to envision, test, and scale ideas will be ready to sync with the values and expectations of the next generation.

RETHINK YOUR SUCCESS METRICS

Don't be a data hoarder, share it for the collaborative good — with partners and organizations, and as a metric for future givers.

THE POWER OF GIVING

Giving will play an extraordinary role in a world that is screaming for change. In this world, businesses and leaders that fall short of bringing giving into their DNA will be made obsolete. We've learned that giving is an individual, collective, and business responsibility and there is growing awareness that it is also part of being a citizen of this planet.

When we build a preferred future that aligns universal interests of every stakeholder in society, everyone stands to benefit. In this sense, the future of giving is intrinsically linked with the future of business and organizations of all kinds, not just philanthropies.

From existential risks that remind us of the urgency to give, to innovations in technology that make it easier for us to be part of a giving society, to the underlying shifts in human behaviors and new ways of thinking about activism, social impact and how we operate our businesses, the future of giving resonates in all of it.

It is time to upgrade how we engage each other on the act of giving and realign purpose and business models against the fundamentals that underpin the creation of a shared future.. The future of your organization depends on it. And so do we.
